Section 01

# How to Use This Deck

# How this deck works (for partners)

## This deck supports:

- **Part 1:** Partner internal reference (operating guidance)
- **Part 2:** SMB customer-facing pitching (customer-safe slides)

## How to use:

- Do not modify product claims, data-handling language, or positioning statements
- Use speaker notes for additional details.
- Keep it customer-relevant: lead with workflows/outcomes; use security as reassurance (not fear)
- **Slides that are marked “Partner-only”** are for reference only, and not to be shown/shared with customers.

# Why this matters for partners – and what it takes to sell ChatGPT Business

# Positioning ChatGPT Business

## An AI assistant for everyday teamwork

Accelerate drafting, reasoning, planning, summarizing, and ideation

Lean teams can move faster

Works across functions (sales, ops, support, leadership, and more)

Improve quality, reduce rework

Adapts to how business works through shared projects and reusable GPTs

Standardized best practice at scale

Provides one secure, shared workspace for teams

A governed environment for collaboration with AI

Best used as a thinking and drafting partner (not a final authority)

Faster execution while staying in control

# What post-sales success looks like

✓ Customers understand what ChatGPT Business is and isn't (clear expectations reduce churn)

---

✓ The first rollout is tied to real workflows (focused start, not "big bang")

---

✓ Teams build habits, not just curiosity (usage becomes part of daily work)

---

✓ Value shows up early (weeks): faster turnaround, fewer bottlenecks, less rework, clearer outputs

---

✓ Expansion follows usage, not promises (prove value → grow)

---

✓ Adoption feels seamless (smooth referral/signup/onboarding → first value story)

# How to sell ChatGPT Business to SMBs

01

Lead with the work, not the product (start with where time/quality/momentum breaks down).

02

Anchor on one or two workflows (avoid broad demos; focus on repeatable tasks).

03

Position ChatGPT Business as the “team-ready” step (move from individual use to shared standards).

04

Start small, prove value, then expand (SMBs buy confidence).

05

Use security as reassurance, not fear (clarity and consistency over risk).

# Questions that unlock the right pitch

Time

Where is time disappearing each week?

Writing volume

Which teams write the most customer-facing content?

Review

What work gets stuck waiting for review or synthesis?

Friction

What tools are people already using informally?

30 day outcomes

What would 'better, faster, more consistent' look like in 30 days?

# A simple, effective pitch flow

01

## Recognition

“Where does work feel slower or more confused than it should?”

02

## Tension

“What happens if nothing changes?”

03

## Relief

Introduce ChatGPT Business as a team-ready solution.

04

## Proof

Use 1–2 relevant use cases tied to their industry/role.

05

## Next step

Rollout, short review window.

# Plans and packaging (high-level)

- ChatGPT Business uses per-seat licensing, designed for team adoption
- Plans vary based on features, admin needs, and scale
- Plan recommendation should reflect:
  - Rollout approach
  - Starting teams
  - Required level of control

# Customer sign-up flow

# Partner checklist (first 14 days)

[Partner-only]

✓ Confirm admin owner

---

✓ Starter use cases selected

---

✓ Templates/prompt examples shared

# Avoid these common issues

- Selling features instead of workflows
- Over-scoping the first rollout
- Weak expectation setting (“it will do everything”)
- Mis-handled attribution steps
- No adoption support post-signup

Section 01

# Operational Expectations & Forecasting

# Operating cadence

## What OpenAI needs from partners

[PLACEHOLDER: Pipeline/forecast  
update cadence + channel]

[PLACEHOLDER: Deal stage  
definitions reference]

[PLACEHOLDER: Required fields /  
minimum info]

[PLACEHOLDER: Escalation criteria  
(when to pull OpenAI in)]

# Next steps

- ✓ Identify priority customers

---

- ✓ Complete forecast and deal stage

---

- ✓ Familiarize the pitch deck

---

- ✓ Schedule and prepare first customer meeting

Section 01

# Introducing ChatGPT Business

# ChatGPT Business

A secure, managed version of ChatGPT designed for teams—helping people work more productively, with consistent access, admin controls, and data protections.

Operational AI for everyday teamwork—not one-off experiments

Boost team-wide productivity by collaborating with AI in one place

Powered by OpenAI's latest models and your company knowledge

# Why do you need this?

Teams are being asked to do more and stay lean, while hiring remains difficult and costs continue to rise.

---

Leaders can't simply add headcount to solve every problem, so productivity gains have to come from working smarter.

There's less room for inefficiency, rework, or slow execution—teams need to move faster and deliver quality.

AI can help—but turning that potential into consistent, secure day-to-day impact is difficult. Uneven expertise and unclear policies often stall real productivity gains.

Does any of this feel familiar to you?

# People are using AI, but everyone's doing it differently

# Why this is worth doing now

AI has crossed the line from novelty to a genuinely useful daily tool, but it's still hard to operationalize at scale.

The real question:

Not: *“Should we use AI?”*

But: *“How do we use it well as a team?”*

ChatGPT Business  
gives teams a  
structured, secure way  
to operationalize AI.

# What changes when teams have a shared way of working with AI

## Less friction

- Fewer blank pages
- Fewer rewrites
- Fewer handoffs

## Higher quality

- Clearer writing
- Better structure
- Fewer back-and-forth loops

## Shared standards

- Shared prompts and templates
- Consistent approaches and outputs across the team

## More control

- Admin-managed access
- Business-appropriate data protections

How might this impact your organization's daily efficiencies?

# What ChatGPT Business is (and what it's not)

# The ChatGPT Business package

| ChatGPT (consumer)                  | ChatGPT Business                                           | ChatGPT Enterprise                                              |
|-------------------------------------|------------------------------------------------------------|-----------------------------------------------------------------|
| Individual use                      | Team adoption                                              | Enterprise governance                                           |
| Consumer defaults                   | Shared standards                                           | Advanced controls                                               |
| Little/no admin control             | Managed access                                             | Large-scale rollout                                             |
| Self-serve                          | Business data protections                                  |                                                                 |
| Great for individual, personal use. | Best for SMB teams that want shared standards and control. | Available for organizations with more complex or advanced needs |

# Built for work, with security in place

- ✓ **Built for real business work** with best-in-class models, deep research, data analysis, and Canvas—supporting writing, strategy, and high-quality outputs teams can trust.
- ✓ **Connected to your company knowledge and tools**, with 60+ integrations and custom apps to complete work end-to-end.
- ✓ **Designed for team collaboration**, with shared projects and custom GPTs that help standardize best practices.
- ✓ **Delivered in a secure workspace**, where customer data is not used to train models by default.
- ✓ **Backed by enterprise-grade controls**, including encryption, SSO, SOC 2, and admin roles.

# What it's not

For individual  
use

It supports your team;  
it doesn't replace  
judgment.

An autopilot

Clear inputs and  
human review still  
matter.

A system of  
record

It supports your tools;  
it doesn't replace  
them.

A reason to  
lower  
standards

It should help raise  
them.

# Know if ChatGPT Business is the right fit

## **More than individual access**

ChatGPT Business isn't just a personal Plus plan tied to a work email; it's a secure, shared workspace for teams.

---

## **Designed for teams, not solo users**

If it's essentially one person without admin or collaboration needs, a consumer plan is likely a better fit.

---

## **Built for growing teams, not full enterprise complexity**

Organizations that need automated provisioning (SCIM), advanced centralized controls (RBAC, analytics dashboards), or guaranteed enterprise SLAs should consider ChatGPT Enterprise.

---

Section 03

# Start where it matters most

# Choosing the right path to start

The strongest results come from:

## Simple starter workflows

**Identify workflows that are:**

- Easy to understand, low risk, immediately useful
- Clear when to use / when not to

## Clear usage norms

**Decide:**

- What work AI is great for
- When humans should take the lead
- What “good output” looks like

## Lightweight guardrails

**Decide:**

- What’s approved to input
- What should never be input
- How outputs are reviewed before use

# Start with workflows, not features

# Key considerations to ensure governance

## Establish clear boundaries

Define what AI is used for—and where human judgment or approval is required—so teams can move fast with confidence.

## Assign human accountability

Establish clear human decision points so AI accelerates work while people remain accountable for quality and outcomes.

## Scale what works safely

Standardize proven prompts and workflows to scale adoption with consistency, control, and predictable results.

Section 04

# Use Cases

# Where teams see and feel the difference quickly

## Common starting use cases

### **Communication & writing**

Emails, proposals, follow-ups

### **Planning & synthesis**

Meeting summaries, structured plans

### **People & Operations**

Onboarding, training outlines, option comparison

### **Knowledge & enablement**

Policies, FAQs, internal guides

## Typical business outcomes

Reduce time from rough draft to a customer-ready version.

Walk out of a meeting with clear actions and ownership.

Faster drafting, and easier decision-making from stakeholders.

Create internal docs once—and reuse them consistently.

# Use case #1: Sales & marketing

## Faster output, better consistency

Draft outreach sequences and follow-ups in your brand tone.

Turn notes into proposals, case studies, and pitch materials.

Create customer-ready summaries from technical docs.

Improve clarity and structure of web copy and product messaging.

# Use case #2: Customer support

## Speed & quality

Draft responses using policy and product context (with review).

Summarize tickets and propose next steps.

Convert repeated issues into FAQs.

Improve tone consistency and reduce escalations.

# Use case #3: Operations & leadership

## Less admin drag

Meeting summaries →  
actions and owners.

First drafts of policies,  
SOPs, internal comms.

Planning docs (quarterly  
priorities, project briefs).

Risk/option analysis and  
structured decision  
memos.

# The onboarding journey

# The onboarding process

# Purchasing with a partner

# What your partner helps with

Identify high-value  
workflows

Set up starter  
use cases and  
templates

Enable teams to  
use it well  
(lightweight training,  
adoption support)

Track early  
outcomes and  
optimize

# Ensuring continuity in setup and support

- Your account is linked to your partner to support onboarding and continuity.
- Your partner remains your primary point of contact for rollout and adoption.

# What Happens Next

# Value compounds over time

# Ongoing enablement

More  
use-case  
examples and  
templates

Best-practice  
adoption  
guidance

# Next steps

- ✓ Schedule discovery session

---

- ✓ Identify priority teams + top workflows

---

- ✓ Schedule onboarding session

---

- ✓ Confirm plan and initial rollout group

---

- ✓ Set a 2–4 week value review

# Q&A

# Thank you
